DS Dash: **Remote Worker Package**

Who are DS-Compliance?

Leadership stems from the top down. The impetus to grow successful business is stimulated by senior and proven leaders.

Founded by senior management who, as Directors, led sectors at Building Societies, PWC and BT, **DS-Compliance** offers a single point of contact for all cyber security issues.

DS Dash: Remote Worker Package

DS-Compliance, a leading developer of applications for compliance has launched the new DS Dash: Remote Worker Package. This new cloud service is a single point of management to support remote worker processes.

DS-Compliance has added these new modules to the award winning DS Dash Platform:

- ID Confirmation - enables anyone to identify individual management of accounts. This also enforces AML and KYC procedures.

- DS Dash for GDPR Management - includes data privacy impact assessments, support for dealing with due diligence third party questionnaires and subject access request breaches.

- DS Dash: Voice - empowers companies to record all conversations using voice transcription to search and alert keywords and phrases. This is perfect for forensic analytics.

- Card Payment Process - removing the need for personnel to have access to card and banking details

- Penetration Testing / Vulnerability Scanning - working to proactively find and fix potential weaknesses in your organisation's cyber security architecture — with the goal of applying fixes before attackers can exploit any vulnerabilities.

- Brand & Reputation Monitoring – provides a complete external digital footprint of what sits outside your organisation that could be exploited by adversaries.

- Security Operation Centre - Managed SOC (Security Operations Centre) couples SIEM technology with a vigilant team of IT experts to provide real-time alerting, correlation, analysis and auditing of threat and compliance issues.
